

# Taliglucerase alfa

Targets (1)

## IDENTIFICATION

### Name

Taliglucerase alfa

### Accession Number

DB08876 (DB06667)

### Type

Biotech

### Groups

Approved, Investigational

### Biologic Classification

Protein Based Therapies

Recombinant Enzymes

### Description

Taliglucerase alfa is the recombinant active form of the human lysosomal enzyme,  $\beta$ -glucocerebrosidase. It was approved in 2012 and is marketed under the name Elelyso for use in patients with type 1 Gaucher's disease.

### Protein chemical formula

C<sub>2580</sub>H<sub>3918</sub>N<sub>680</sub>O<sub>727</sub>S<sub>17</sub>

### Protein average weight

56637.9397 Da

## Synonyms

Glucosylcerebrosidase

prGC-D

prGCD

## External IDs [i](#)

PRX-112

**PHARMACOLOGY****Indication**

For the treatment of adult Type 1 Gaucher disease.

---

**Associated Conditions**

[Gaucher's Disease Type 1](#)

[Type 3 Gaucher disease](#)

---

**Pharmacodynamics**

Patient's with Type 1 Gaucher disease have a long-term deficiency in the enzyme, glucocerebrosidase. Taliglucerase alfa is a modified form of glucocerebrosidase and is provided to counter this enzyme deficiency, resulting in smaller liver and spleen size, and improved thrombocytopenia and anemia.

---

**Mechanism of action**

Taliglucerase alfa is different from human glucocerebrosidase by two amino acids at the N terminal and up to 7 amino acids at the C terminal. This recombinant enzyme allows the hydrolysis reaction of glucocerebroside to glucose and ceramide that naturally occurs in healthy individuals.

Not Available

Human

Talglycerase alfa is administered IV by absorption is 100%.

### Volume of distribution

The steady state volume of distribution is between 7.30 to 11.7 L.

### Protein binding

Plasma protein binding was not quantified.

### Metabolism

Metabolism was not determined.

### Route of elimination

Route of elimination was not determined.

### Half life

The half life is between 18.9 to 28.7 min.

### Clearance

The systemic clearance was approximately 30 L/hr and 20 L/hr for 30 and 60 units/kg, respectively.

### Toxicity

The most common toxic reaction seen was infusion reactions such as urticaria, arthralgia, headache, and chest pain due to IV administration.

### Affected organisms

Humans and other mammals
